

# **LANGUAGES USED**

## **1.HTML – Hyper Text Markup Language**

***HTML.** First developed by Tim Berners-Lee in 1990, **HTML** is short for Hypertext Markup Language. **HTML** is **used** to create electronic documents (called pages) that are displayed on the World Wide Web. Each page contains a series of connections to other pages called hyperlinks.*

## **2.CSS- Cascading Style Sheet**

*CSS is the language for describing the presentation of Web pages, including colors, layout, and fonts. It allows one to adapt the presentation to different types of devices, such as large screens, small screens, or printers. CSS is independent of **HTML** and can be used with any XML-based markup language.*

## **3.JS- Java Script**

***JavaScript** is one of the world's most popular programming languages, primarily used to add automation, animations and interactivity to Web pages. Web developers use **JavaScript** for anything from automating simple tasks to creating complex Web pages that behave like desktop software applications.*
